

Brio™ cleaning products

Brio™ Cleaning Products use ultra-performance microfiber to clean and dust without chemicals. The special microfiber weave of Brio™ products attracts dust like a magnet and lifts dirt, dust and grease from surfaces, trapping it in the cloth.

Microfiber is also extremely absorbent; soaking up to seven times its own weight in water. Brio™ products are highly durable and can be machine-washed, reused and won't harm delicate surfaces – scratch free and lint free.

DID YOU KNOW?

Since 1994, microfiber cloths have been used without chemical agents by the semiconductor industry to maintain the clean rooms where computer processors and microchips are produced.

Because microfiber is synthetic, it can retain a static charge that enables the cloths to attract dust and dirt particles. To maintain this unique ability, machine-wash microfiber products in cold water without fabric softener and dry on medium without dryer sheets.
